

To run [RPG.py](#), the following files are necessary:

- 1) A JSON file which contains a dict which can be used to create a Creature which has the stats of the player character that will be used in the game
- 2) A JSON file which contains at least one dict which can be used to create a Creature which has the stats of the enemy(s) which will be used in the game
- 3) A txt file which contains the map of the game, represented as a field of '.' bordered by '#' with enemies represented as 'E'

These files are passed as command line arguments when running the game. Throughout the game, there will be further input fields with instructions for what they are used for and what inputs are required.

Function/Method Name	Primary Author	Techniques
init (RPG.py)	Moshe Lederman	With statements
init (RPG.py)	Moshe Lederman	json.load()
Creature Class & YouKilledMe Class	Moshe Lederman	Composition of two custom classes
Parse_args()	Moshe Lederman	Argument Parser
move_player	Jennifer Ruano	Sequence unpacking
display_map	Jennifer Ruano	Comprehension expression
inventory_algorithm	Joel Chomnou	Keyword argument
inventory_algorithm	Joel Chomnou	Conditional expressions
enemy_reaction()	Derek Happy	F-strings containing expressions
enemy_reaction()	Derek Happy	Optional parameters
